**Apple**

**Location: California**

Dear Mr. / Mrs.

I am currently finishing my third year as a student at UTC (Université de Technologie de Compiègne), in the Computer Engineering track, and I am looking for a six months internship, starting in September.

I am writing in connection with the offers you have presented at the UTC (Université de Technologie de Compiègne), introduced by Mr Joey Diab on April, 3 2012. Briefly, the two subjects were about New tools development and Siri System Improvement. Apple is known as the company which merges design and technology, and it would be a real chance for me to work in such a company. Every Apple product is an example of this philosophy, and Siri, as natural voice recognition software, is probably the best concept of User Interface ever made: an UI which does not need an Interface, because it is working as a human would do. I am sure I have a lot to learn from this philosophy, which I already try to put into practice, at my scale.

Keen of new technologies, I am totally dedicated into understand what are my clients' needs and find the technological solution adapted. I had the occasion to put it into practice, developing from scratch a web photo gallery, for a photographer who wanted to easily show online more than 30.000 photos. It is also a good example of my skills using PHP, JS and SQL. This website shows off my desire to create products at the same time functional, easy to use and attractive. In this experience, as in the others I got, I always tried to show intellectual rigor. It is a quality also required in my curriculum, especially in the "Economy and quality control" class which I have validated with honors. Autonomous and proactive, I like to put my motivation at the service of my workgroup, as I did for 7 years, as class – then school – representative. This year, I have especially developed my skills in algorithm (using C, and particularly under UNIX system), object oriented coding (using C++) and database (SQL). It gives me the ability to quickly adapt myself to most of the development languages, in software or web.

Enclosed to this application is my resume. This provides more comprehensive view of my qualifications. I am at your disposal for any further information you might require and I would be delighted to further discuss it with you. I look forward to hearing from you very soon.

Jean-Baptiste Degiovanni
